I used Gemini for the mind map exercise. The pre-written prompts did not get Gemini to immediately create a graphic. The initial result was a bullet list of features, and eventually strategic outcomes and value. I had to request graphics in separate prompts. The V1 graphic was ineffective, and the V3 graphic was preposterous because I did not provide guardrails. I tried again and got poor results. Gemini started drifting heavily and began spitting out *Lorem ipsum* placeholder text instead of content from the session.

V1 Atomic Table

Category	Atomic Element	Details
Profile	User Metrics	Age, Weight, Activity level, Climate
Goals	Intake Targets	Auto-calculated, Manual override, Health conditions
Logging	Input Types	One-tap presets, Custom volume slider, Historical logging
Fluids	Beverage Options	Pure water, Hydrating alternatives, Dehydrating modifiers
UI	Visuals	Progress fill-animation, Percentage tracker, Dark mode
Alerts	Reminders	Fixed intervals, Smart inactivity triggers, Sleep-time blocks
Rewards	Gamification	Daily streak counters, Milestone badges, Virtual pet/plant
Charts	Analytics	Day/Week/Month trends, Daily averages, Peak logging times
Sync	Integrations	Apple Health, Google Health Connect, Smartwatch app
System	Data & Settings	Cloud backup, Metric/Imperial unit toggle

V1 Visual Interpretation

V3 Atomic Table

Category	Atomic Element	Details
JTBD	User Needs	Automated metric formulation, <2s single-tap entry speed, Climate scaling
Motivators	Psychological Drivers	Cognitive offloading, Performance tracking identity, Shared peer group loops
Friction	Behavioral Hurdles	Workplace distraction focus drop-offs, Container volume estimation fatigue
UX Limits	Operational Bottlenecks	Multi-tap app launch logging penalty, Multi-fluid tracking inputs
Scoping	High Impact Matrix	Quick Wins (interactive push alerts), Strategic Bets (coefficient logic engines)
Priority	Low Impact Matrix	Fill-Ins (static widgets), Thankless Tasks (complex vessel builders)
Revenue	Monetization Paths	Freemium subscription MRR, Ad-supported tiers, Corporate wellness SaaS
Risks	Churn & Retention	Novelty drop-offs, Notification permissions loss, Wearable sync desyncs
Mitigation	System Fail-safes	Visual streak updates at day 7, Calendar-aware silence blocks, Local storage caches
Tensions	Strategic Debates	High-fidelity fluid data maps vs. Low-friction speed, Executive minimalist vs. Gamified loops

V3 Interpretive Art
